                                   This sequence encodes the human sodium-dependent phosphate cotransporter (C) (MAPTR) of the invention. NAPTR and agonists of it can be used to treat or prevent disorders associated with decreased phosphate levels, cor prevent disorders associated with decreased phosphate levels (C) cancers of the kidney, disorders of decreased phosphate levels including tumoural calcinosis, osteomalacia, osteoporosis, familial hypophosphatementa, rickets, cysteneuria, nephrocalcinosis, familial hypophosphatementa, rickets, cysteneuria, nephrocalcinosis, familial hypophosphatementa, rickets, cysteneuria, nephrocalcinosis, familial chypophosphatementa, rickets, cysteneuria, nephrocalcinic sis, myophosphate syndrome, myoclonic epilepsy, cellitus, hereditary amyloidosis, myopathies including progressive external ophthalmoplegia, Kearns-Sayre syndrome, myoclonic epilepsy, cencephalopathy, cardiomyopathy, hypokalaemia, Goodpastures syndrome, and cisorders of cell signalling through cAMP, ATP, NADPH and collisorders of cell signalling through cAMP, ATP, NADPH and collisorders associated with increased phosphate. Antagonists or inhibitors of NAPTR may be deministered to a subject to treat or prevent disorders associated with increased phosphate levels, e.g. hypocalciuria, hypocalcaemia, and corporation phosphate regulation in neurons, gastrointestinal tract and liver. The products can also be used for detection, diagnosis and drug
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human sodium-dependent phosphate cotransporter coding sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1527
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1277
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1227
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human haemochromatosis gene NTP3.
Bovine butyrophilin; BT; human hereditary haemochromatolism; NPT3; NPT4; RoRet; BTF1; BTF4; BTF5; milk protein; lupus; Sjogren's syndrome; type 1 sodium transport gene: ss.
Claim 52; Fig 7; 209pp; English.

The present invention describes hereditary haemochromatosis gene products from the human haemochromatosis gene. Also described is a method to determine the presence or absence of the common hereditary haemochromatosis (HFE) gene mutation in an individual comprising:

(a) providing DNA or RNA from the individual; and (b) assessing the DNA or RNA from the individual; and (b) assessing the the presence or absence of a haplotype or genotype where the presence or absence of the haplotype genotype indicates the likely presence of the HFE gene mutation in the genome of the individual. The HFE gene sequences from the present invention can be used to develop products for use in the diagnosis and treatment of HFE. The present invention also describes BTF genes, which are homologues of the milk protein butyrophilin (BT), and can be used in the production of agonists and antagonists of BT function. Also described are: (1) a RoRet gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       401

PS Claim 7; Page 48-50; 64pp; English.

CC countertransporter (LSCT) BNPI (see W70500). LSCTs provide the CC physiological mechanism for the extrusion of lithium from cells, cc i.e. they regulate the cell concentration of lithium. LSCT activity CC determines the therapeutic effect of lithium. The invention provides a simple molecular biological test for the ability of cells to extrude lithium. LSCTs have significance for cells to extrude lithium. LSCTs have significance for cells to extrude lithium. LSCTs have significance for cells to including manic depressives, to treatment with lithium salts. Probes and primers for BNPI, piT-1 (see V33501), PiT-2 (see V33502) can be used in diagnostic tests useful for genetic screenings to predict whether a patient will respond to lithium cumborns. The test is also a screen for susceptibility to, and extent of, manic depressive illness, and is suitable for screening contents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Align seg 1/1 to: V33503 from: 1 to: 2716

PN S KW DE ACC

Sodium-dependent phosphate cotransporter coding sequence fragment.
Sodium-dependent phosphate cotransporter; human; NAPTR; cancer; myopathy;
cell signalling disorder; phosphate regulation disorder; therapy; ss.
Homo sapiens.
W09837198-A1.

(a) providing DNA or RNA from the individual; and (b) assessing the DNA or RNA for the presence or absence of a haplotype or genotype where the presence or absence of the haplotype genotype indicates the likely presence of the HFE gene mutation in the genome of the individual. The HFE gene sequences from the present invention can be used to develop products for use in the diagnosis and treatment of HFE. The present invention also describes BTF genes, which are homologues of the milk protein butyrophilin (BT), and can be used in the production of agonists and antagonists of BT function. Also described are: (1) a ROREt gene which can be used to develop products for the study, diagnosis and treatment of lupus and Sjogren's syndrome; and (2) NPT3 and NPT4 genes which are homologues of a type 1 sodium transport gene, and can similarly be used for hypophosphatemia.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes hereditary haemochromatosis gene products from the human haemochromatosis gene. The present sequence represents a hereditary haemochromatosis subregion from an individual unaffected by hereditary haemochromatosis (HH). Also described is a method to determine the presence or absence of the common hereditary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     30-SEP-1997; U17658.

CC This sequence represents one of 5191 Staphylococcus aureus DNA sequences confit the invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using the S.aureus DNA sequences allows putative functions to be assigned so conduct that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are concerned in a vaccine composition against S.aureus infection of the used in a vaccine composition against S.aureus infection of collypeptides can also be used in a kit for the immunodetection of concerned sequences and surgical wound infections, food poisoning, osteomyelitis, skin and surgical wound infections, scalded skin syndrome, toxic shock syndrome, etc. Organisms transformed with the DNA sequences can be used computer readable medium.

The nucleotide sequences depicted in SEQ ID No:1 to 391. The nucleotide sequences depicted in SEQ ID No:1 to 391. The nucleotide sequences depicted in SEQ ID No:1 to 391. The nucleotide sequences depicted in SEQ ID No:1 to 391. The present invention also describes an isolated nucleic acid molecule encoding a homologue of any of the fragments of the S. pneumoniae genome (SEQ ID No:1 to 391) where the nucleic acid molecule is produced by a process comprising: (a) screening a genomic DNA library using as a CC probe a target sequence defined by any of the sequences in SEQ ID No:1 to 391, identifying members of the library which contain sequences that hybridise to the target sequence and isolating the nucleic acid molecules from the members; or (b) isolating mRNA, DNA or cDNA produced from an organism, amplifying nucleic acid molecules whose nucleotide cragment of the S. pneumoniae genome to primers derived from the S. pneumoniae genome to primers derived from the cused in a computer-based system for identifying fragments of the S. pneumoniae genome. Products from modulating fragments of the S. pneumoniae genome. Products from the present compositions and vaccines for S. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Align seg 1/1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          US-09-391-958-1 x V52165
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Percent Similarity:

Critis sequence represents one of 5191 Staphylococcus aureus DNA sequences CC of the invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using CC the S.aureus DNA sequences allows putative functions to be assigned so CC that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are CC likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S.aureus infection. The CC s.aureus in a sample. S.aureus is implicated in numerous human diseases, CC including cellulitis, eyelid infections, food poisoning, osteomyelitis, CC skin and surgical wound infections, scalded skin syndrome, toxic shock CC syndrome, etc. Organisms transformed with the DNA sequences can be used CC ind their fragments) are useful as primers or probes for isolating CC homologues of any of the S.aureus DNA sequences contained on the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Align seg 1/1 to:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Percent Similarity:

alignment_block: alignment_scores: cover or under expression of TR protein by identifying mutations in C the TR gene, or determining TR polypeptide or mRNA expression levels due to an infection of an organism with the TR gene (claimed). CC They can diagnose the stage and type of infection. TR polypeptides CC are also useful for screening for compounds which affect the care also useful for screening for compounds which affect the care also useful for screening for compounds which affect the care also useful for screening for compounds which affect the care also useful for screening for compounds which affect the care also useful for screening for compounds which affect the care also useful for screening for compounds which affect the care also useful for screening for compounds which affect the care also useful for screening for compounds which affect the care also useful for careful candinistration of TR polypeptides can be used to treat conditions of associated with a lack of TR (claimed). Direct administration of CC antisense oligonuclectides prevents expression. TR polypeptides candinistration of candinistrated directly, in a vector (gene therapy) and as a vaccine) candination antibodies induce an immune response to immunise and prevent conclude: bacterial, especially S. aureus, infections of the careful decrease (claimed). Diseases diagnosed, prevented or treated conclude: bacterial, especially S. aureus, infections of the careful abscess), gastrointestine (e.g. splenic abscess), CNS (e.g. CC cerebral abscess), eve (e.g. conjunctivitis), kidney and urinary concludes induced and bone and joint (e.g. septic arthritis). TR polypeptides, polynucleotides and their (ant)agonists can prevent cathesis and body implants to prevent bacteria, infection Align seg 1/1 to: x07357 from: 1 US-09-391-958-1 x X07357 Percent Similarity: 391 362 AAACTGCC..... 312 TAACATTTTCCAACATCAATCCCCATTAACTTTAGTTGGACGTATTATTC 274 TATGGCGTGATATTAATCATT.....TTCGGATCAATTATTGG Claim 4; Page 25-27; 35pp; English.

Claim 4; Page 25-27; 35pp; English.

This is the coding region of a new Staphylococcus aureus gene encoding tetracycline resistance protein (see w97820) that is involved in sugar or drug transport across bacterial cytoplasmic membranes. The gene can be isolated from an S. aureus WCUH29 (NCIMB 40771) DNA library. Vectors comprisons the claimed 83 67 wounds and body implants to prevent bacterial infection. transcribed during both chronic and acute infections. (NCIMB 40771) DNA library. Vectors comprising the claimed polynucleotide, host cells and a process for producing the tetracycline resistance (TR) protein are claimed. TR polypeptides and polynucleotides are useful for diagnosing diseases related to 50 erThrSerProGlnSerGlnLeuAsnAspSerSerGluValLeuProVal 66 Sequence 36 nAsnValIleMetAsn.....IleThrMetValAlaMetValAsnS 50 20 TyrGlyIleAlaLeuValLeuHisPheCysAsnPheThrThrIleAlaGl 36 New Staphylococcus aureus tetracycline resistant protein and gene useful as diagnostic reagents and for prevention and treatment of staphylococcal infections, including toxic shock syndrome and otitis (SMIK) SMITHKLINE BEECHAM CORP.
